

TOMORROW'S CHALLENGES

IN TODAY'S BUILDINGS

Designing Buildings Wiki have joined forces with BSRIA to launch a new competition looking for fresh and innovative ideas in response to the question:

How can buildings be designed today to ensure they are resilient to the changes they will face tomorrow?

Your idea could relate to:

- Urbanisation and demographics.
- Climate change and energy efficiency.
- New technologies.
- Health and wellbeing.
- Affordability.
- And more...

**Closing
date 2nd
Nov 2017**

We're looking for ideas, not essays, so short answers are fine!

The winner will receive £500 worth of BSRIA membership, training or publications, and along with 4 runners-up, will be featured in BSRIA's Delta T magazine and on Designing Buildings Wiki.
